

Reverse shock and density-bump secondary RS

Region 3 emission uses newly dissipated energy rather than recycled FS heat.

$$\Gamma_2 = \Gamma_3 = \Gamma_c, \quad p_2(\Gamma_c) = p_3(\Gamma_c)$$

$$\gamma_{m,3} = 1 + \frac{\epsilon_{e,3} p_3 - 2}{\xi_{N,3} p_3 - 1} \frac{u_{\text{diss},3}}{n_3 m_e c^2}$$
